

Wildlife Recordings – Data standardization

Airport – ICAO

July 2017

Shifts

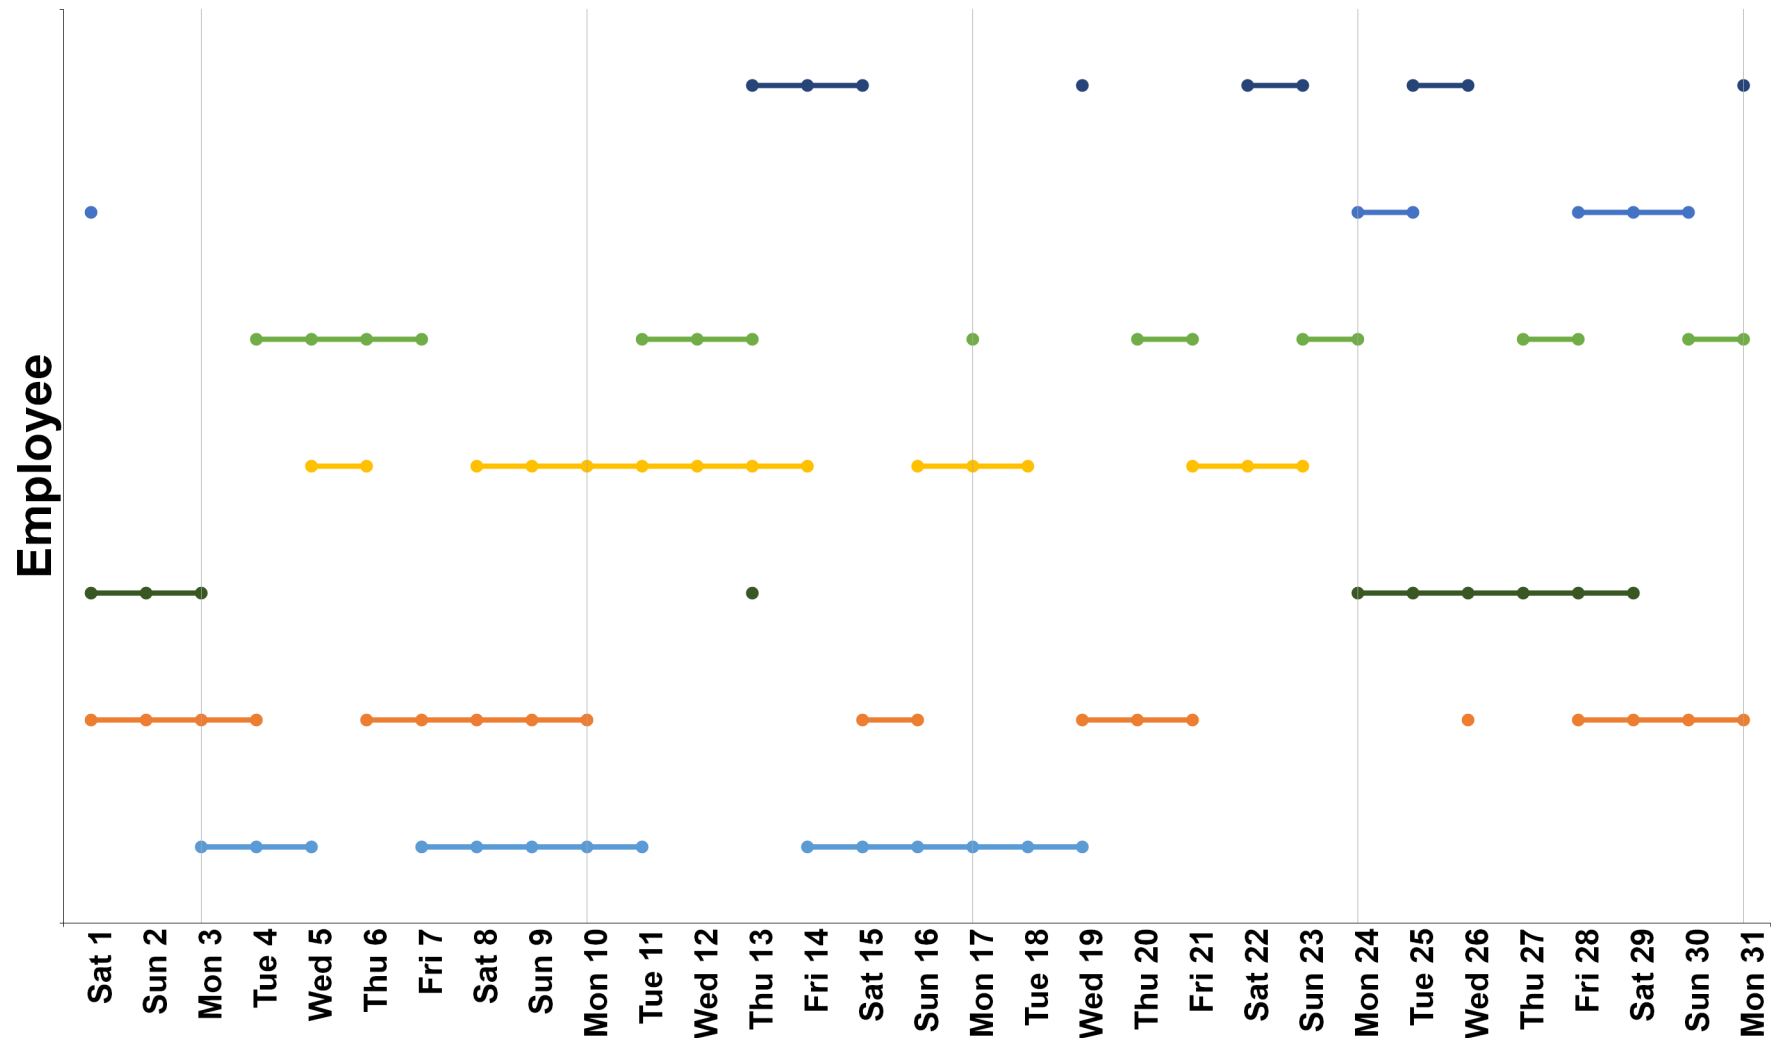

Figure 1. Overview of which days each employee has made recordings

Activity

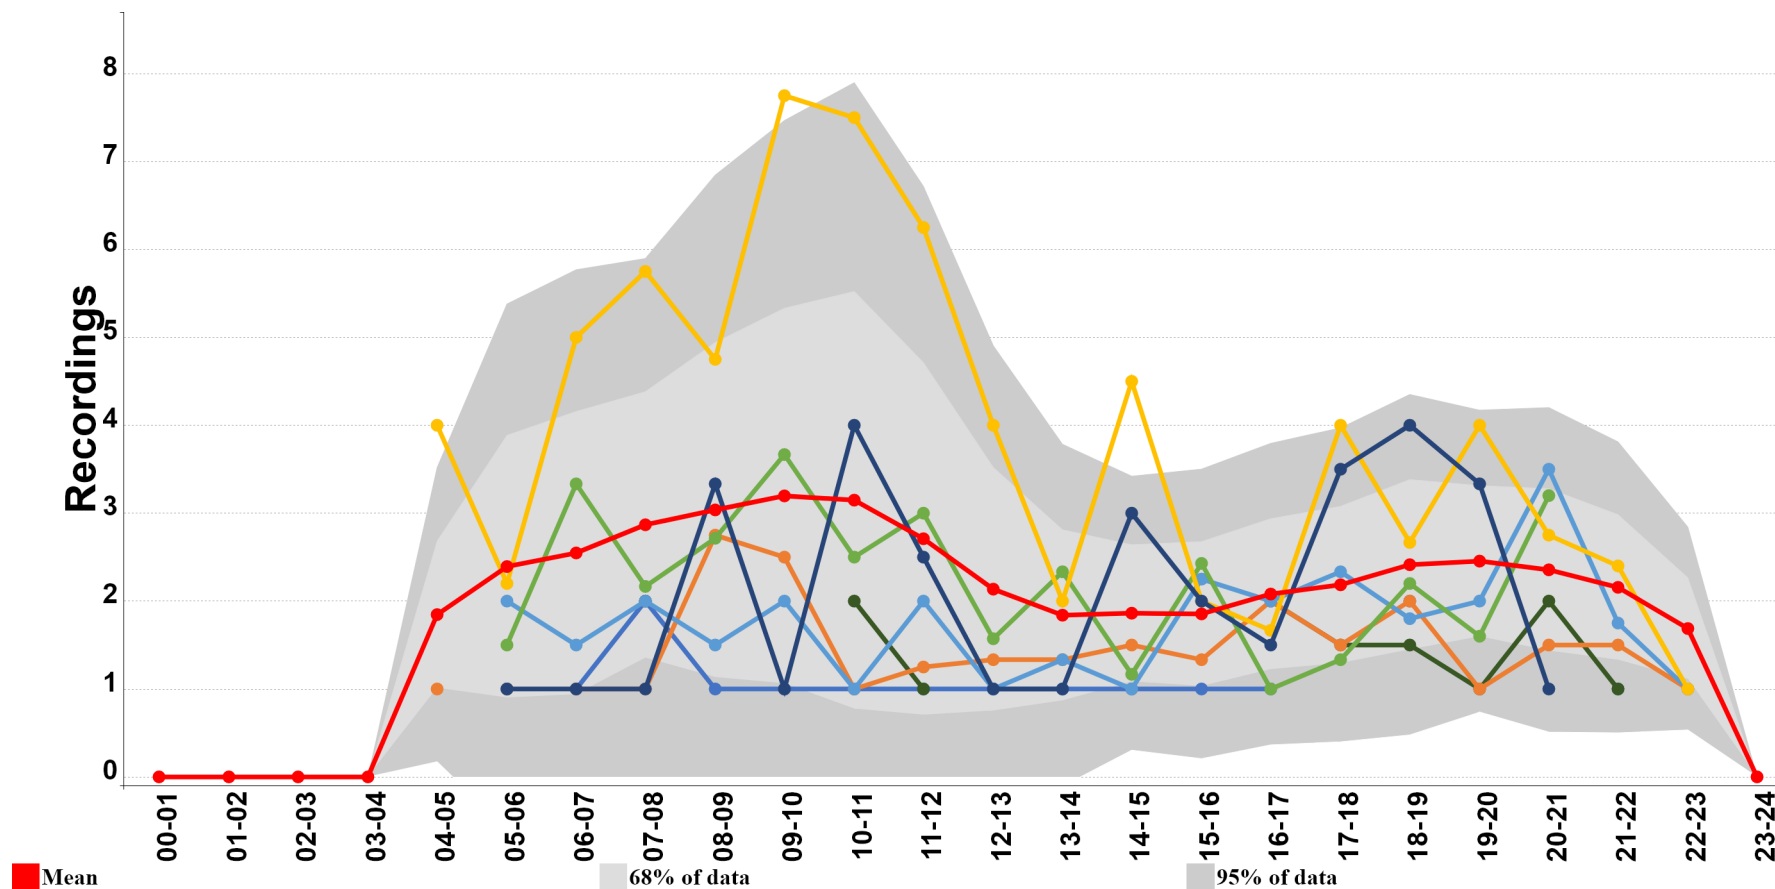

Figure 2. Average number of wildlife activity recordings per shift in hour intervals made by each employee. The mean is weighted by the number of shifts the employees have in the interval and smoothed by using data from the preceding and succeeding interval. The employee line colors match the previous graph.

No-activity

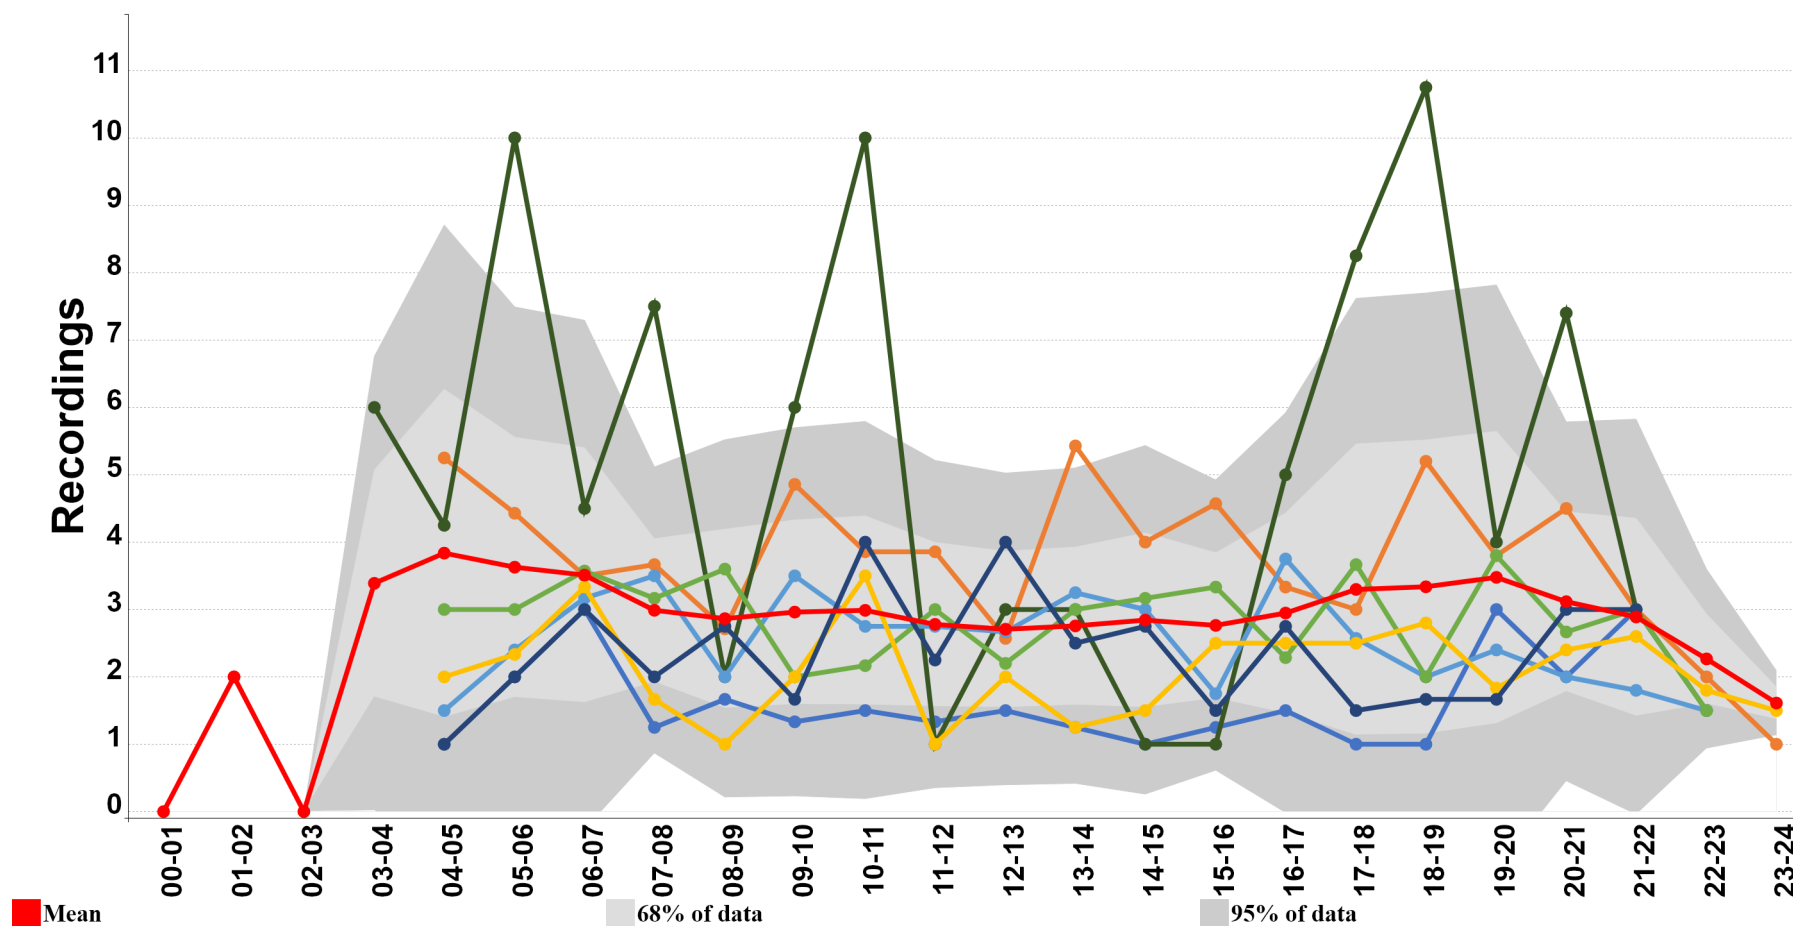

Figure 3. Average number of wildlife no-activity recordings per shift in hour intervals made by each employee. The mean is weighted by the number of shifts the employees have in the interval and smoothed by using data from the preceding and succeeding interval. The employee line colors match the previous graph.
