ANY PROCESS CAN BE DIGITALIZED

No matter if you are performing a daily inspection of a fire truck or a runway inspection, we can digitalize the process in one easy to use solution. Imagine inputting all data capture processes with just a few touches of a tablet or phone. The data is available for you right away in a digital format, with reports for management, specialists and staff.

CUSTOM DESIGN OF REPORTS

Based on the collected data we will customize the reports to your requirements. This includes reports of the same data to different sections of the airports.

- Management reports
- Risk reports

- Compliance reports
- Status reports for staff

SECURE DIGITAL DATA CAPTURE VIA SMARTPHONES AND TABLETS

Ascend Digital Airport suite is an integrated information management platform, that helps airports enhance operational efficiency by digitalizing all processes of data capture. This enables efficient monitoring and management of critical information.

Digital airport

"Input all airport data with just a few touches on a tablet or phone"

Data access

All recorded data and reports are available on our web-portal 24/7. We can make the data available via an API or alternatively integrate with your existing safety management system.

Data security

All recorded data is automatically uploaded, stored and backed up to the same security standard as our NATO customers. You can read our infoSec document via the link in the footer.

Feedback

Help us help you by giving us feedback – we will continually focus on developing the reports to solve your problems, and identify risks based on the data analysis.

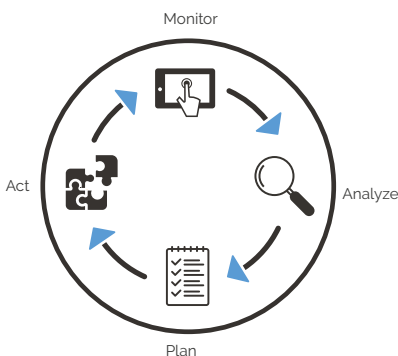

Safety management

We want to supply actionable results to you, not just data. That means we will be working with you to integrate the measurements performed by your staff, into your safety management system. If we understand what "triggers" or thresholds you are looking for to prompt a response, we can include this in the data analysis.

Custom flow pricing

Depending on the size of your airport, number of users and processes/recording flows, we will tailor the price to your needs. Contact us for an offer. Standard flows have no implementation cost, custom flows have a one time cost of €150 pr/ hour spent on developing the flow. Standard flow development normally takes 10-15 hours.

Get started

It is easy to get started – we will help you to set up the app, so you can be ready to record right away. The service will be tailored to match the needs of your airport staff and processes. As part of the solution, you and your staff can follow the status in real-time as well as receiving historical analysis.
